Features of ![i-Reporter logo] i-Reporter

The best digital form solution for your business.

Easy to deploy and manage! Turn all your paper forms into digital forms!

---

point 1

Your paper forms and Excel forms convert to digital forms with no programming or retraining

The forms your employees know work exactly the same, no need to spend endless hours retraining.
Forms work intuitively and capture data accurately.
No need to spend hours retraining how to use the digital form.

---

point 2

Reduce input errors and capture various kinds of data.

i-Reporter allows you to set ranges for data input, set required data fields, embed photos from the iPhone/iPads camera, read barcodes or QRCodes, plus many more.
Make sure the data entered into forms is accurate and all essential data is captured.

---

point 3

Always know what is happening on the manufacturing floor or in the field.

Data from forms is instantly available once the form is uploaded to the server.
The data can then be exported via CSV, Excel, PDF, or to other systems via the built-in API.

---

point 4

i-Reporter is feature-rich and puts everything someone on-site or production floor in one app

Users can reference manuals, take photos, check schedules, and their data is accessible in real-time. i-Reporter can also be customized for any industry, or workflow, to make sure on-site users collect data quickly and accurately.

---

point 5

Easily link with external systems and databases with an API

Data from forms can be sent to external systems and also used to populate on-site or production floor forms. i-Reporter automates data tabulation, reporting, and analytics when forms are submitted to the server. This saves time by eliminating manual report compilation.
