Limitation for Cloud version license

Limited Number of Log-in Users

In the cloud version, the maximum number of login users is up to 100.

(Number of login users set in the cloud version
= 5, 10, 15, 20, 25, 30, 40, 50, 80, 100)

Limited Disk Space

The maximum disk space is limited to the number of login users subscribed $\times$ 6 GB. Therefore, the maximum disk capacity for up to 100 users is 600 GB.

In the basic package, disk space is to the number of login usres subscribed x 2GB.
 Ex) disk space for 5-user contract is 10GB

Limitations for data acquisition from the cloud server

- Automatic file output function (CSV, PDF, EXCEL, XML, image)
  - Due to not to use the folder monitoring program on the cloud server, document data is outputted automatically to WebDav folder provided on the cloud environment.
  - If you want to get the data from the server for the system linkage, you need to use WebDav functions or Web API option.

Limitations for using PostgreSQL DB view function

- Not available to refer the table view for the cloud server
  - In the Cloud version, you cannot connect to a Postgres SQL database directly and view the database.
  - If you want to output data to the outside in the cloud, you can only use the method of acquisition using the WebDav function or Web API option.

Restrictions on Optional External Linkage API

- Web API option costs 330,000 yen per year. (annual contract only)
- All external linkage API sets can be used.
  （*ConMasGenerator cannot be installed onto a cloud server.）
- The following limitations exist in using Web API option.
  - Data registration restrictions with a single API call：Up to 10MB
  - Download data volume with a single API call : up to 100MB
  - Registration and download data volume with API per day : up to 1GB
