

i-Repo FreeDraw

A hand-written note app that centralizes and digitizes on-site documents

allowing for handwritten notes on drawings and materials to be managed in one place.

A specialized hand-written note app designed for business use, ideal for digitizing and managing on-site handwritten notes effectively.

Integrate with i-Reporter, allowing you to consolidate multiple reports into a single document.

Consolidate and centrally manage the reports created using i-Repo FreeDraw and i-Reporter into a single document.

No loss in image quality! Supports even large A0-size drawings without any degradation in image quality.

The imported images remain in high quality, allowing you to write on them while maintaining their original clarity and sharpness.

Meets the stringent requirements demanded for business use.

Includes detailed user-level permission settings and necessary security features such as history management for saving and editing activities, ensuring strong security measures are in place.

Seamlessly integrate with various cloud storage platforms and chat tools.

Import files from cloud storage and write on them, share them to chat tools or send them via email directly from the app.

Freely write handwritten notes on drawings, photos, documents, and more.

Easily write handwritten notes directly on PDF drawings, photos, and other documents. The toolset is also comprehensive, allowing you to use various options for expressive annotations.

i-Repo WorkFlow

Create complex approval workflows effortlessly with simple operation.

Since i-Reporter offers seamless integration, the implementation and configuration are also simplified.

Creating simple approval workflows is now a breeze.

Configure the flow easily using intuitive mouse operations like drag and drop.

Provides clear approval status indicators that are easy to understand.

You can easily grasp the approval status at a glance, including "Pending," "Approved," and "Rejected."

It also supports complex approval workflows.

Supports advanced features such as conditional branching, AND approval/OR approval, and specifying rejection points, making it compatible with complex approval workflows.

Integrates with email and various chat tools, providing notification functionality.

By sending notifications through email, Slack, Microsoft Teams, and other tools, it helps prevent any oversight and ensures that nothing goes unnoticed.

* i-Repo WorkFlow is an optional feature of i-Reporter. To use it, a valid license for i-Reporter main software is required.

i-Repo Project

Dramatically streamline progress management of any projects

Introducing the next-generation progress management tool.

Introducing a new generation of digital communication tool that revolutionizes progress management workflow.

Easy to use and user-friendly!

Easily create work flows and Gantt charts, and minimize the effort required for input and verification with simple operations.

Real-time reflection of progress status.

You can monitor the real-time progress of tasks in three visualization views tailored to your needs: To-Do, In Progress, and Completed.

Digitize paper inspection forms and enhance efficiency!

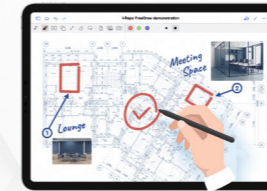

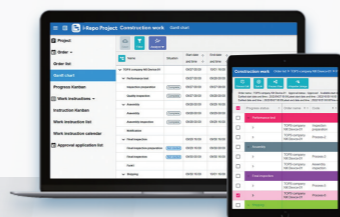

Use your familiar Excel forms directly on your device, eliminating the need for paper exchange. *Please note that i-Reporter is required separately.

Easily check and report work instructions using your smartphone or tablet.

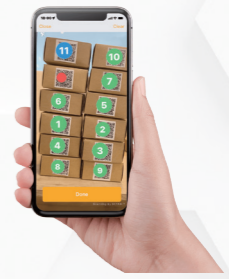

Conveniently check work instructions and enter actual progress using your smart devices, anytime and anywhere.

Enhance communication by integrating with chat and email systems, promoting active collaboration and streamlined information sharing.

Integrate with external systems and communication tools, allowing for seamless collaboration and data exchange between different platforms.

A specialized hand-written note app designed for business use

Bulk scan multiple barcodes

By simply answering questions from the chatbot, you can create on-site work records and reports

By inputting with the web browser, i-Reporter reports can be generated automatically

For on-site workers

i-Reporter

For administrators

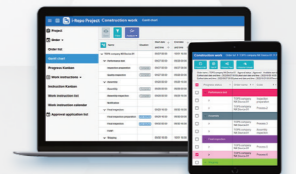

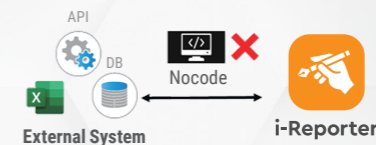

Create complex approval workflows with simple operation

Dramatically streamline progress management of any projects

Easily integrate with other system without coding

Solve your on-site work issues with the **i-Reporter family of products!**

Turn your desire to do **more** on-site into a reality!

The electronic reporting system for on-site documentation, i-Reporter, is now even more user-friendly!
With the implementation of our family of products,
on-site work becomes even more efficient and comfortable.

i-Repo Chat

By simply answering questions from the chatbot,
you can create on-site work records and reports.

By following the guidance of the chatbot and inputting the required information,
you can automatically generate reports.
This streamlines on-site work processes and increases efficiency.

Using the chat tool, you can easily complete both the tasks and reporting.

Since all you need to do is answer questions, anyone can accurately perform tasks and create reports.

The information you provide through the chat will be directly incorporated into the generated reports.

The information you provide through the chat tool will be automatically reflected in the report's format. This allows for seamless creation of the report as soon as the on-site work is completed.

Available for use on the web and with messaging tools.

Compatible with LINE, Slack, Microsoft Teams, and WebChat (web browser), allowing you to use it on these platforms.

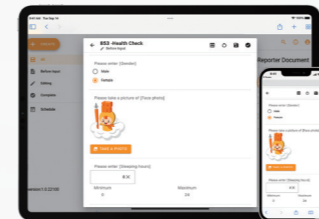

You can create chatbots without any coding using a no-code platform.

Without the need for complex programming or development, you can easily utilize it using a no-code approach.

* i-Repo Chat is an optional feature of i-Reporter. To use it, a valid license for i-Reporter main software is required.

i-Repo Web

No-Code Web Recording and Reporting App

Web-based record and reporting application where anyone can easily create work logs and reports by simply following the provided guidance for work input.

Automatically generate record and report documents upon completion of input.

i-Reporter automatically generates record and report documents, enabling real-time information sharing. It also supports data output and integration with other business systems.

Customize the guidance text for each report format.

By displaying work procedures, input rules, and important notices, users can easily navigate and utilize the application without any confusion.

Simple operation via no-code

All configuration settings can be easily managed through the administration panel.

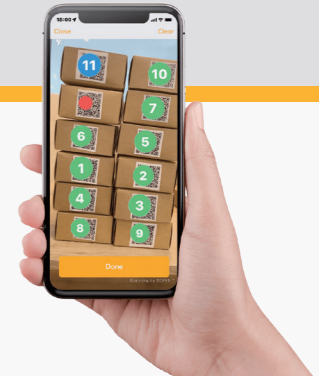

Can be used through a web browser regardless of the device or operating system.

You can use it on your smartphone, tablet, or PC by simply accessing it through a web browser.

* i-Repo Web is a new feature of i-Reporter that is provided free of charge. However, to use it, you will need a valid license for i-Reporter itself.

i-Repo Scan Powered by SCANDIT

No more need for a handheld terminal anymore!
Bulk scan multiple barcodes.

Achieve accurate barcode scanning, even for challenging barcodes that are difficult to read.

Drastically accelerate the process of scanning a large number of barcodes.

Dramatically speed up inventory management and picking operations.

Detect barcodes that do not meet the specified criteria to prevent operational errors.

By preparing a predefined list, any barcodes that are not included in the list will trigger an alert for identification.

Achieve zero barcode reading errors even with a large volume of barcodes!

Prevent barcode reading errors by displaying the numbers on the barcode once they have been scanned.

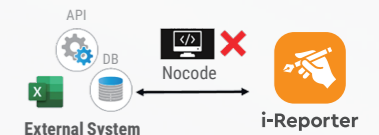

Makes the need for dedicated portable terminals obsolete!

Operable through the iPad and iPhone app, eliminating the need for a dedicated handheld terminal.

* i-Repo Scan is an optional feature of i-Reporter. To use it, a valid license for i-Reporter main software is required.

i-Repo Link

Achieve seamless data integration with external systems!
Easily integrate with other system without coding

No development of integration programs is required.

Eliminate transcription errors and streamline business operations for maximum efficiency.

Save time by eliminating the need to input data into multiple systems and centrally manage all types of reports.

The input results of the reports are automatically saved in the external system.

When you save the reports in i-Reporter, the input results are automatically saved in the designated fields of the external system that you have specified in advance.

Utilize the data from external systems to create reports in i-Reporter.

Access real-time master data and other information from external systems as well.

Easy set up!

With simple easy to follow steps, anyone can easily integrate the system according to their requirements.

* i-Repo Link is a new feature of i-Reporter that is provided free of charge. However, to use it, you will need a valid license for i-Reporter itself.
